@Kipei: the main issues is the I-F you have such a natural value - then yes, you can use it as a primary key.BUT: values like DATETIME for instance are NOT useful for a clustering key, since they have a 3.33ms accuracy only, and thus duplicates can exist. So in such a case, you *still need an INT IDENTITY instead - therefore, I typically use that by default, since frmo my 20+ years of ...

What are the best practices for using a GUID as a primary ...

What is a purpose of the font records here? HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Fonts I tried to put a font in other directory than \Windows\Fonts and the path to it in this key. I could then see the font in other programs.

windows 7 - What is the purpose of the Fonts key in the ...
Great post. Have a few questions: 1. For WAL, NOSTEAL/FORCE case, you mention no UNDO/REDO is required for crash recovery. I am not sure about that, specifically think about the case where log is written (point 1), then data buffers are being written (points 2, 3, ...) and some where randomly there is a crash between these points.

How does a relational database work | Coding Geek
Reply: Hello Ali! Thank you very much for such a thoughtful comment! I wholeheartedly agree with this warning, but I feel that it is a bit off topic, as it is not directly related to PDO, but to the abuse of the auto-generated identifiers in general.

(The only proper) PDO tutorial - Treating PHP Delusions
If database design is done right, then the development, deployment and subsequent performance in production will give little trouble. A well-designed database 'just works'. There are a small number of mistakes in database design that causes subsequent misery to developers, managewrs, and DBAs alike. Here are the ten worst mistakes
