Boyle's Law . Torricelli's experiment did more than just show that air has weight; it also provided a way of creating a vacuum because the space above the column of mercury at the top of a barometer is almost completely empty. (It is free of air or other gases except a negligible amount of mercury vapor.)

Boyle's Law data graphed. This part of the lab went rather well. The equation for the trend line in the plain volume vs. pressure graph is $y = 381.12e^{-0.023x}$. The equation for trend line in the inverse volume ($1/v$) vs. pressure graph is $y = 4815.7x + 25.686$.

Natural Acidity of Rainwater. Pure water has a pH of 7.0 (neutral); however, natural, unpolluted rainwater actually has a pH of about 5.6 (acidic). [Recall from Experiment 1 that pH is a measure of the hydrogen ion (H^+) concentration.] The acidity of rainwater comes from the natural presence of three substances (CO_2 , NO , and SO_2) found in the troposphere (the lowest layer of the atmosphere).
