Chemistry and More - Practice Problems with Answers

We're now posting original research! Yes, as of late November we are hosting our own original study titled An Examination of the Effect of Prior Experience, Age, and Gender in Non-Food Blending Predictions. Though this title sounds pretty scientific, it just refers to an experiment I did with putting rubber balls in a blender to see...

How to Write a Chemical Equation. A good way to think about a chemical reaction is the process of baking cookies. You mix the ingredients together (flour, butter, salt, sugar, and eggs), bake it, and see that it changes into something new:...

The Best Way to Write a Chemical Equation - wikiHow

A binary compound is one made of two different elements. There can be one of each element such as in NaCl or KF. There can also be several of each element such as Na₂O or AlBr₃. Please remember that all elements involved in this lesson have ONLY ONE charge. That includes BOTH the cation AND the anion involved in the formula. Points to remember about naming a compound from its formula

ChemTeam: Nomenclature-Binary Compounds

Honors Chemistry is designed for students who have demonstrated strong ability in previous science courses. In this fast-paced, demanding course, the main topics--which include atomic theory, nuclear chemistry, periodicity, chemical reactions, stoichiometry, gases, solutions, reaction kinetics, equilibrium, acid-base theory, oxidation-reduction, and organic chemistry--are studied at an ...

Honors Chemistry - Dr. VanderVeen

Potassium is one of the alkali metals. The alkali metals are the elements that make up Group 1 (IA) of the periodic table. The periodic table is a chart that shows how chemical elements are related to one another.
