Exercise testing elicits the body's reaction to measured increases in acute exercise. The changes in heart rate, blood pressure, respiration, and perceived level of exercise provide data that permit quantitative estimation of cardiovascular conditioning and function. Exercise tests provide an opportunity to observe a person during exercise. By monitoring heart rate and blood pressure and continually ...

Post-incident critiques often confirm that experience gained during exercises was the best way to prepare teams to respond effectively to an emergency. Exercises should be designed to engage team members and get them working together to manage the response to a hypothetical incident. Exercises enhance knowledge of plans, allow members to improve their own performance and
