Physics Concept Development Practice Page

About HyperPhysics. Rationale for Development. HyperPhysics is an exploration environment for concepts in physics which employs concept maps and other linking strategies to facilitate smooth navigation.

HyperPhysics - Georgia State University

Physics (from the Ancient Greek φύσις physis meaning "nature") is the fundamental branch of science. The primary objects of study are matter and energy. Physics is, in one sense, the oldest and most basic academic pursuit; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world.

History of physics - Wikipedia

In physics, a field is a physical quantity, represented by a number or tensor, that has a value for each point in space-time. For example, on a weather map, the surface temperature is described by assigning a real number to each point on a map; the temperature can be considered at a fixed point in time or over some time interval, if one wants to study the dynamics of temperature change.

Field (physics) - Wikipedia

x Epidermal cells are positioned on the most out layer of skin and thus have the potential risk of being exposed to environmental factors. The biological effect of ionizing radiation (IR) on the skin tissue is a significant problem for medical applications, such as radiotherapy for cancer treatment.

In each of these two example problems, the angle of refraction is the variable to be determined. The indices of refraction (n_i and n_r) are given and the angle of incidence can be measured. With three of the four variables known, substitution into Snell's law followed by algebraic manipulation will lead to the answer.
