An embedded system is a controller programmed and controlled by a real-time operating system (RTOS) with a dedicated function within a larger mechanical or electrical system, often with real-time computing constraints. It is embedded as part of a complete device often including hardware and mechanical parts. Embedded systems control many devices in common use today.

Much of the water originates around the highest mountains on earth, a region often called "the third pole" because of its immense concentration of snow and ice, the largest outside the Arctic and Antarctic. Relying on a complex interplay of seasonal weather such as the monsoon and the specific dynamics of a region that is deeply vulnerable to climate change and socio-economic pressures ...
